

**Composting is nature's way of recycling...and the Rapid Compost Tumbler is the gardener's way of helping nature to do its best!**

## **The greater the variety... the better the compost!**

It's a fact - the more diversified the mix of materials you put into your Tumbler, the more likely you are to get a nicely balanced compost!

Try some of these organic materials in your Tumbler:

- ▶ Grass Clippings
- ▶ Shredded Newspapers
- ▶ Shredded Leaves
- ▶ Fish Scraps
- ▶ Sawdust
- ▶ Cow Manure
- ▶ Weeds
- ▶ Pig Manure
- ▶ Spent Flowers
- ▶ Sheep Manure
- ▶ Garden Wastes
- ▶ Hen Manure
- ▶ Fireplace Ashes
- ▶ Alfalfa Hay Straw
- ▶ Hedge Trimmings
- ▶ Peat Moss
- ▶ Kitchen Scraps (but not grease!)
- ▶ Chicken Feathers
- ▶ Ground Oyster, Clam or Lobster Shells

### **Successful Gardeners Agree...**

- ▶ The **Rapid Compost Tumbler** eliminates backbreaking work and the need for special tools. You just use the convenient handle to turn the drum 5 or 6 times each day!
- ▶ The **Rapid Compost Tumbler** puts an end to messy, smelly compost heaps - and won't attract rodents!
- ▶ The **Rapid Compost Tumbler** is designed for comfortable use by almost everyone - gardeners of all ages say it's a joy to use!
- ▶ The **Rapid Compost Tumbler** makes it easy to recycle your organic yard and kitchen waste - and do your part to control over-flowing landfills.
- ▶ The **Rapid Compost Tumbler** makes nutrient-rich "brown gold" for your yard, garden and indoor plants in 14 days!

**Here's the dirt on why the *Rapid Compost Tumbler* is the best way to make better compost!**

## Other compost-making methods just can't measure up to the Rapid Compost Tumbler...

### Traditional Compost Heaps

are great in theory but in reality they're messy and smelly... and they attract rodents, bees and flies! They become heavy and wet, getting harder and more tedious to turn every day. Even worse - your best

nutrients leach into the ground instead of staying in your compost where you want them. (not so in the self-contained, off-the-ground design of the Rapid Compost Tumbler!). Good decomposition takes a long time with an open heap, so you need to keep several going to ensure a supply of ready-to-use compost.

### Open Compost Bins

do nothing more than just fence in your compost heap. While this looks neater, it makes it even harder to do the turning needed to get balanced decomposition within your compost heap. You still do all the

backbreaking, knee-jarring work, trying to turn your compost with a pitchfork (unlike the Rapid Tumbler, which needs only a simple turn of the handle!). What's more, open bins are an open invitation to rodents, scavengers, snakes, bees, flies and other garden pests.

**Plastic Enclosed Bins** are little more than expensive garbage cans! They make it next-to-impossible to turn your mix from the bottom - even with a special turning tool designed for bins. Without thorough mixing you just don't get the rich, balanced compost that works best in your garden! It's also awkward to empty your compost, trying to pull it out through a small door at ground level.

### Vertical Tumbling Units

just aren't designed well. Their shape prevents the proper drainage and even aeration needed for an effective heat core. The result is often a wet, slimy mess instead of rich, crumbly compost. This design also makes tumbling difficult - and even dangerous! When the mass

of material shifts, the unit tends to swing (With a Rapid Tumbler, the drum is properly designed for evenly distributed weight, safer and easier to turn, as well as proper air and moisture control).

### Rolling Drum Composters

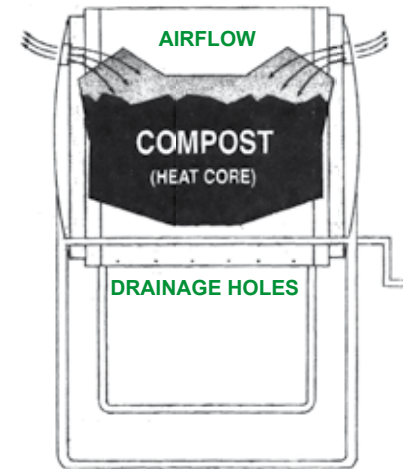

don't have the design features of the Rapid Tumbler that make them easy to use. When full, these Composters are quite heavy, and without an easy-grip handwheel or geared crank handle, can be very difficult to rotate. Transfer to a wheelbarrow is virtually

impossible with this design, and pushing it around your yard is a tedious process - especially if your yard is not perfectly level. The Rapid Composter is superior in its design features, is very easy to turn, and allows for a simple transfer to a wheelbarrow.

## With the Rapid Tumbler, you create the perfect environment for making compost in 14 days!

No hard physical exertion. No flies and rodents. No long wait. Just nutrient-rich compost in two weeks!

- ▶ No Back Strain...a joy to use
- ▶ Easy to turn...easy to empty
- ▶ Even distribution of mass for vital heat core
- ▶ Properly controlled air flow and drainage
- ▶ Fast, reliable decomposition
- ▶ Nutrients stay in your compost
- ▶ Made in Australia.

## Try the compost making method gardeners prefer!
